GEM 80 System Programmer Emulator

8890

INTRODUCTION

Use your IBM PC, XT, AT or 100% compatible computer to mimic the operation of the GEM 80 System Programmer.

With the GEM 80 System Programmer Emulator, the chosen computer can perform all the functions of the System Programmer.

Conversion is as simple as plugging in the communications adaptor card and inserting the master disk.

The Emulator package consists of:

- A master program disk.
- A communications adaptor card.
- A keypad overlay.
- A GEM 80 programming lead.
- A technical/operating manual.

FEATURES

- The Emulator is identical in operation to the GEM 80 System Programmer.
- Requires only one expansion slot in your chosen computer.
- Can program and edit all GEM 80 Ladder Diagrams and Graphics/Video systems.
- Provides printout of program or data with full cross referencing and rung comments (parallel output).
- Can program and edit Basic language processors and programmable serial communications.
- Can be used to program, monitor and document any of the current range of GEM 80 controllers (excluding Microgem).

IBM is a registered trademark of International Business Machines.

GEM 80 PRODUCT DATA

GEM 80

PC REQUIREMENTS -

1. At least 640K of RAM memory.
2. Either two floppy drives of 320K capacity or one Winchester and one floppy drive.
3. The Emulator communications card occupies a slot position, therefore one must be available in your system.
4. The Emulator communications card is configured as serial port COM2. If another serial port is required this must be configured as COM1.
5. If you intend to use the printing facilities of the Emulator then you also require a parallel printer port.
