Course Title: Siemens WinCC Flex HMI Training Course

This WinCC Flex training course has been designed to give Engineers an insight into the configuration and operation of the Siemens WinCC Flex software coupled with Siemens HMI products. The course will guide students through the basic design and configuration of the HMI systems through to the operation and integration into the PLC control system.

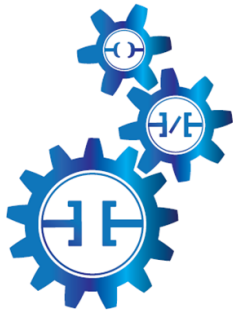

Where possible, application specific exercises, actual drawings and plant programs will be used to allow the students to gain the greatest possible benefit from the course.

Course Objectives:

- ☒ To introduce students to the concepts and operation of Siemens HMI's and WinCC Flex programming software.
- ☒ To be able to understand the structure of the HMI project in the WinCC Flex programming software.
- ☒ To be able to use the WinCC Flex programming software to create and develop a basic project and to be able to modify existing WinCC Flex HMI projects.
- ☒ To be able to restore a project backup into the Siemens HMI from a backup copy.

Course Content:

Understanding Siemens HMI's and their properties.
First steps using WinCC Flex programming software.
Creating a WinCC Flex training project to demonstrate application examples.
Basic HMI drawing skills.
HMI tags and their creation.
Configuring the online connection to the HMI.
Creating PLC based tags.
Downloading the project to the HMI.
Obtaining runtime in WinCC Flex to simulate the HMI.
Developing plant mimics.
Configuration and screen development for project navigation.
Creating alarms and alarm displays.
Real time trending configuration and screen development.
Historical trending configuration and screen development.
Text list configuration and screen development.
HMI security and allowing access to specific pictures.

AUTOMATION ACADEMY
